

HEALTHCARE HEADSET SYSTEM

The Quail Digital Healthcare Headset is a wireless headset system designed for clinical staff communications

Increases Staff Communication

The Quail Digital Healthcare Headset System is a lightweight, digital wireless communications system designed to allow clinicians, physicians and assistants to talk hands-free as a team. It is ideal for use in the interventional OR or hybrid suite, at monitoring stations, through adjacent control rooms and in ancillary areas.

Product Features

- up to 30 headset users
- headset weighs just 23g
- hands-free and push-to-talk
- broadcast feature for conference & training
- physician voice/dictation recording
- interference free

As healthcare technology and procedures evolve, the use of wireless headsets by clinical teams is becoming commonplace.

More Effective

Clear discrete audio communication between physicians and clinical staff in interventional cardiovascular and other minimally invasive therapeutics results in safer, more effective workflows and treatment.

Secure Frequencies

Operating on high quality DECT frequencies, the system is encrypted to avoid interference from other devices or powerful emissions in the OR. Multiple systems can be used in the same premises without break-through.

Quail Digital Healthcare Headset System comprises a wall-mounted base station, up to 30 headsets and 6-port headset charger/storage racks.

Headset Part Numbers

Q-HCBS	<i>Q-Digital Base Station</i>
